

AI Draft to Professional Documentation

Before and After Example

BEFORE: AI-Generated User Guide Content

The user can click the Add Asset button to add an asset. The Add Asset button is used for adding assets. After clicking Add Asset, information should be entered. The user should enter information correctly. The system may provide reminders. Reminders are sent when reminders are needed. Users should check their assets periodically to ensure compliance requirements are met.

Issues Identified

- Repetitive wording
- Vague instructions
- Missing prerequisites
- Inconsistent terminology
- Lack of procedural structure

AFTER: Professional Documentation

Adding Assets

Use this procedure to add a new asset.

Procedure

Prerequisite: You must have permission to create assets.

1. Select **Assets** from the navigation menu.
2. Select **Add Asset**.
3. Complete the required fields:
 - Asset Description
 - Manufacturer
 - Model
 - Serial Number
 - Calibration Due Date
4. Select **Save**.

The asset is added to the test equipment database.

The system automatically generates calibration reminders before the due date to help maintain compliance.

Improvements Made

- Removed repetition
- Added prerequisite information
- Converted text into a procedure
- Standardized terminology
- Improved readability and usability
